

History & Culture

Microsonic was founded in 1964 by Miklos Major in a small rented basement and has since grown into a global leader in manufacturing the highest quality custom ear molds available. In addition, Microsonic also carries a wide variety of auxiliary hearing health care products, in order to satisfy the various needs of our customers.

Presently, Microsonic is **women owned** and operated by his daughter Monika Major. Microsonic has committed itself to transforming our facility while emphasizing on remaining current with emerging trends and adopting the latest technologies to better serve our customers.

Fluxx Audio, a subsidiary of Microsonic, has now been created to focus on the increase in demand for hearing protection. Fluxx Audio has also reached out to local charities to support hearing conservation efforts. Currently, we are a proud sponsor of the Children's Hospital of Pittsburgh Foundation's **Cheers for Ears!** Program. Our team feels strongly about hearing health and preservation and that starting with and educating our youth is the most proactive way to prevent hearing loss and/or damage.

In order to distinguish ourselves from other laboratories, we actively train our technicians and guide them through an extensive training process before allowing them to go "live" when working in the production department. It is not unusual for a member of our production team to undergo 3 years of preparation prior to the start of work. Also, we have a pediatric department that is staffed with art school graduates, so as to ensure our patients are happy with their aesthetic, colorful and sometimes sparkled ear molds. Here at Microsonic, we are a family and we treat our custom products as if we were making them for a loved one.

Why Choose Us

What are we good at? We are **experts in earmold design**. We can help with your difficult fittings or design new mold styles for any application. No question is unanswered and we will do our best to help in any way we can.

Here are a few products and services we can offer you:

- Free consultation on problem fittings
- Engineer services for new products to market
- 3D Manufacturing
- Accepting 3D Scans from all manufacturers
- 3D scanned impressions archived for 5 years (FREE)
- Over 60 earmolds styles
- Rainbow, stripes, marble, dots, and glitter earmolds
- Hypoallergenic colored earmolds
- Open Fit/RITE Molds

Do you need something that is not listed above? A customer service representative awaits.

Contact us at 1-800-523-7672. Ask for a starter kit, and **your first set of earmolds are on us!**

Monika Major, CEO/President
Microsonic, Inc.

Dearest Customer,

My name is Monika Major and I would like to share my story with you. As a youth, my father worked very long hours and so on the weekends I would get an opportunity to 'tag-along' with him to the lab. Initially, I went along just so I could be near and spend time with him. Weekends were a time when he would run experiments to formulate new materials and processes. I felt so happy when I was in the earmold lab. As I became older, he would allow me to work along with him. Eventually, he would allow me to participate in those experiments and trials. Working in the lab never felt like a job to me. As I became older, being in the "lab" turned into my passion and this still holds true today.

I later went on to school to obtain a B.S. in Finance and then later an M.B.A at the Katz Graduate School of Business from the University of Pittsburgh. I currently get to enjoy being able to provide an American manufactured product and provide jobs to our local people here in Pennsylvania. We have families who work here and they rely on me and each other to support them. I love my job and my employees and I welcome you to join our team to support us for years to come.

Sincerely Yours,
Monika Major, CEO/President
